Assignment - Day 2 - Computer Basics

1) What is a Computer?

Computer is a electronic device which can process the data given in the input and gives the output , it is a set of RAM , secondary Memory like SSD/HDD , processor , I/O Devices

2) What is RAM?

RAM is a temporary/volatile memory which is faster and takes instructions from memory and gives those instructions to the processor and then it loads the output according to an instruction in memory ,so it acts as an interface between secondary memory and microprocessor.

3) Where is data stored in a computer?

Data is stored permanently in the secondary memory like SSD/HDD.

4) What is that input device used to type text and numbers on a document in the computer system?

It is generally the input devices like Keyboard.

5) What are the output devices?

The output devices are the devices which are used to display the output like Monitor , Printers etc…

6) Which is the input device that allows a user to move the cursor or pointer on the screen?

It is the input device which is a Mouse , trackpad.

7) Which language is directly understood By the computer Without a translation program?

The only language computers or any electronic device understand is a binary language which has only two bits 1 and 0.

8) What are input devices?

Input devices are the devices which are used to give any input to the Computers like keyboard , Mouse etc.
